## Using Your Setup Instructions

The Euro LT Hybrids Setup Instructions are created specifically for your configuration.
They are laid out sequentially in levels, including exploded views, and a logical series of detailed steps to assemble the main structure and components. We encourage you to study the instructions **before** attempting to assemble your exhibit.

Each page reminds you to tighten the setscrews after disassembling your exhibit to prevent loss of the locks and setscrews (see below in RED). This is VERY IMPORTANT.

Cleaning and Packing Your Display

1) Use care when cleaning aluminum extrusion or acrylic inserts. Use only non-abrasive cleaners.
2) When cleaning laminate inserts, countertops, or panels use mild cleansers and a soft material such as cotton.
3) Keep all display components away from extreme heat and long exposure to sunlight to avoid warping and fading.
4) Retain all packing material. It will make re-packing much easier and will reduce the likelihood of shipping damage.

Connector

Level 1 = Blue
Level 2 = Red
Level 3 = Green
Level 4 = **Black**

Panel Lock When Required
Color Coded Clip w/ assembly number
Black Clip is bottom of panel

Each component has 2 clips, the lower clip is ALWAYS black. The top clip is color coded to distinguish which level. The color coded clip also contains the numbered label.

Cut Away View of Slide Clips

Left Panel   Right Panel

Components connect together by aligning them and sliding downward connecting clips together.

Example of Connection

Panel Lock When Required
Color Coded Clip w/ assembly number is top of panel

Configurations are assembled from left to right, usually starting with #1 and following the numbered sequence.

Top View of Panels with Locks

Left Hand Grasps Panel Firmly
With Right Hand Thumb Close to Seam Squeeze, Push Forward, And Lift

The first level of components contain panel locks that are located at the top of the panel for extra stability and seamless connection. When disassembling panels twist top connection slightly and lift right panel upward.

General Setup Instructions for Extrusion System

The Tool
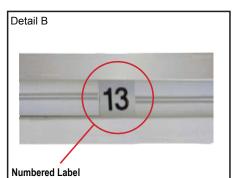

Most exhibits can be assembled with the supplied Hex Key Tool. Occasionally, a flat head screwdriver may be required.

Typical Connection

Typical Connection (cont'd)

Most horizontal extrusion connections have a patented expandable lock. This lock inserts into the groove of an opposing extrusion. Tightening the lock with the Hex Key Tool expands the lock and creates a strong positive connection.

Detail B
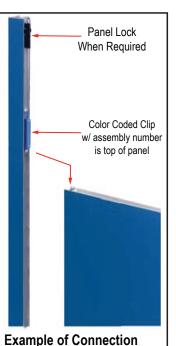

Numbered Label

Each extrusion contains a numbered label which corresponds with setup instructions. The label is located within a groove of the extrusion (when possible). With extrusion components the labels contain Black numbers unless otherwise specified.

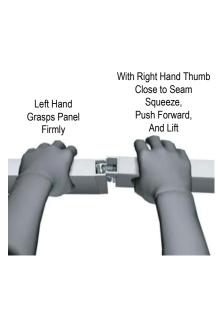

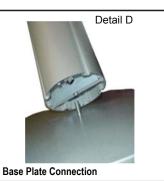

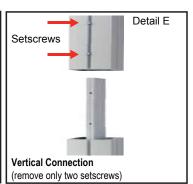

Detail C

Horizontal Inline Connection (remove only one setscrew)

Remove only (1) setscrew when disassembling. Replace setscrew in extrusion after assembling it. Before packing, replace setscrew in extrusion to avoid losing it.

Detail D

Base Plate Connection

Attach base plate to round or square vertical extrusion using the bolt provided. Be careful not to strip the threads.

Detail E

Setscrews

Vertical Connection (remove only two setscrews)

When vertical extrusions are packed in portable cases rather than crates or tubs, they must be broken down into smaller sections which then require assembly.
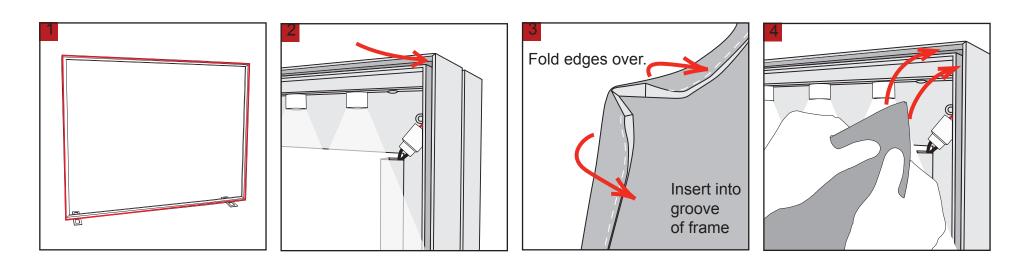

Remove only (2) setscrews when disassembling. Replace setscrews in extrusion after assembling it. Before packing, replace setscrews in extrusion to avoid losing them.

© 2019

1) Locate channels along the edges of extrusions

2) Insert graphic corners first into channels then center point of graphic into channels. Allows for proportional fit around the perimeter of the extrusion.

3) Working from center to corner, slide silicon edge on graphic into channel.

4) After all edges of graphic have been inserted into channels, step back and assess graphic fit, make adjustments where needed.

TSP46

TSP49

Steps:

Assemble frames flat on floor, then raise upright to attach connecting extrusions.

Front Frames:
1) Assemble horizontals [8] [8A] between verticals [2A] [3A], then connect horizontals [9] [9A] between verticals [3B] [4A], and attach horizontals [10] [10A] between verticals [4B] [5A]. See TSP46 Corner Connection detail.
2) Attach vertical [2] to vertical [2A], using cam locks. See Custom Cam Lock for TSP46 detail.
3) Attach vertical [3] between [3A] and [3B], using cam locks.
4) Attach vertical [4] between [4A] and [4B], using cam locks.
5) Attach vertical [5] to vertical [5A], using cam locks.

Back Frame:
6) Connect horizontals [12] [12A] between verticals [1A] [6A]. See TSP49 Corner Connection detail.
7) Attach frame assembly [8/8A/2A/3A] between verticals [2,3], using cam locks. See Custom Cam Lock for TSP49 detail.

Completed Frames Assembly

Item	Qty.	Description
7,7A	1,1	28" Z45 Horizontal Extrusion
11,11A	1,1	28" Z45 Horizontal Extrusion
13	1	88.417" Z33 Vertical Extrusion
--	1	Door Threshold
--	2	Infill

Steps:
8) Attach horizontal [7] between vertical [1] and [2], then slide
   Infill between verticals then secure with upper horizontal [7A].
9) Install door threshold between verticals [5] and [6].
   See Door Threshold Attachment detail.
10) Connect horizontal [11] between verticals [5] and [6], then slide
    Infill between verticals then secure with upper horizontal [11A].
11) Attach vertical [13] between horizontals [12] and [12A].
12) Connect door between verticals [5] and [6].
    See Door Connection detail.
13) Apply SEG graphics to front and back of closet assembly.
    See SEG Graphic Installation sheet for instruction.

Completed Closet Assembly

✱ Door Threshold Attachment

Slide Connector into groove of extrusion.

Tighten setscrew to secure.

Door Threshold

✱ Door Connection

Slide Pin into Hinge attached to Vertical. Slide Door Hinge over Pin.
